

This Pilot focuses on testing the effectiveness of the WISER approach when applied to the procurement of energy products. The testing focuses on risks deriving from a global supply network configuration. Events range from low impact and high probability to high impact and low probability. This pilot will validate the WISER real-time platform capabilities end-to-end, for the entire service value chain.

"The comprehensive risk management that WISER delivers will improve our situational awareness to cyber risk exposure in terms of real-time performance including data from non-traditional networks of devices such as smart energy products and mobile devices". **Roberto Mannella, Chief Information Security Officer, Rexel Group.**
