

EMBL-EBI

The European Bioinformatics Institute, part of the European Molecular Biology Laboratory, is a centre for research and services in bioinformatics. EMBL-EBI provides freely available data from life science experiments, performs basic research in computational biology and offers an extensive user training programme, supporting researchers in academia and industry. Furthermore it contributes to the advancement of biology through basic investigator-driven research, help disseminate cutting-edge technologies to industry and coordinate biological data provision throughout Europe.
