

Enervalis

Enervalis is a cloud-based software for electricity producers, storage providers & consumers focusing on 3 markets: Smart Electric Vehicle (EV) Charging, Energy-Clever Buildings and Intelligent Micro-/Off-Grids.

There is a global shift underway towards sustainable energy sources, increased demand for energy supply security and independence from centralistic energy supply models. Enabling this transition requires more efficient organisation & management of all available energy supplies, storage and demands. The Enervalis cloud-based SMARTPOWER-Suite offers production & consumption forecasting for optimal green-energy utilisation, wholesale energy market integration for the lowest energy purchase cost and extensive interoperability, security, app & user interface layers, which can all be combined as needed.
