### CyberWISER Light: ciberseguridad inteligente de las empresas europeas

Es una herramienta online gratuita para empresas de e-commerce de cualquier tamaño. CyberWISER Ligth es la primera de una serie de nuevos servicios, desarrollados en el marco de WISER que estarán disponibles próximamente.

22 de junio 2016

WISER, una iniciativa europea de gestión de ciber riesgos liderada por Atos ha lanzado **CyberWISER Ligth**, una herramienta online gratuita para empresas de e-commerce de cualquier tamaño. El nuevo servicio ofrece un enfoque avanzado de gestión de riesgos cibernéticos, para evaluar mejor los riesgos y proteger sus activos digitales.

CyberWISER Ligth, es una herramienta fácil de usar que incorpora funciones avanzadas que mejoran su resistencia a las amenazas de las empresas, que pueden conocer su exposición al riesgo cibernético con una mínima inversión de tiempo y recursos. Su utilización resulta especialmente interesante para las pequeñas y medianas empresas, que son vitales para la economía europea, pero que, por falta de tiempo, recursos y dinero son más vulnerables a estos ataques.

Las consecuencias de los ataques cibernéticos a menudo son importantes y duraderas para las empresas y pueden afectar a la marca, a sus clientes, a su negocio y, además, debilita la capacidad de sus víctimas para ganar nuevos negocios. Por ello, mejorar la protección contra el delito cibernético del pequeño negocio es esencial y debe ser una prioridad en su dirección.

CyberWISER Ligth es la primera de una serie de nuevos servicios, desarrollados en el marco de WISER que estarán disponibles próximamente. Incluye un cuestionario que permite establecer el perfil de riesgo de cada empresa y permite realizar pruebas de vulnerabilidad para evaluar su exposición a la seguridad cibernética, identificando vulnerabilidades en la infraestructura. Además, su uso crea y refuerza la cultura de seguridad de las empresas y de sus equipos.

CyberWISER Light ofrece valiosas recomendaciones a los órganos de decisión de las PYMES elaborados por expertos en seguridad de la información. Estas sugerencias varían desde realizar evaluaciones periódicas de la seguridad de los activos digitales de la compañía a ejecutar pruebas de penetración, con el fin de encontrar vulnerabilidades que permitan entender las implicaciones de no proteger adecuadamente datos personales, propiedad intelectual o cualquier otra información sensible.

Con CyberWISER Light, la gestión del ciber riesgo se convierte en una parte central de los procesos de negocio. "Para compañías como WinMedical ésta es una importante oportunidad para evaluar nuestros ciber riesgos y dar los pasos adecuados para minimizar su potencial impacto en nuestra compañía", comenta **Emmanuel Angione**, representante de WinMedical, una PYME italiana escogida para las pruebas piloto de CyberWISER Light.

### CyberWISER Light: Helping European Firms get smart about Cyber Security

June 8, 2016

Digital business is fast becoming the only way to do business. Yet evidence shows that too many small- and medium-sized businesses are not considering the impact that a successful cyber attack could have on their business. And many SMEs fail to take adequate steps towards achieving a strong security posture.

The impact of a cyber breach can be huge and long lasting. Business that have already have experienced a breach have said the attack led to brand damage, loss of customers, and a reduced ability to win new business. Studies in the UK, for example, estimate that the annual cost to a small company could be as high as €6000.

### CyberWISER Light: Helping European Firms get smart about Cyber Security

Digital business is fast becoming the only way to do business. Yet evidence shows that too many small- and medium-sized businesses are not considering the impact that a successful cyber attack could have on their business. And many SMEs fail to take adequate steps towards achieving a strong security posture.

The impact of a cyber breach can be huge and long lasting. Business that have already have experienced a breach have said the attack led to brand damage, loss of customers, and a reduced ability to win new business. Studies in the UK, for example, estimate that the annual cost to a small company could be as high as €6000.

CyberWISER Light is a free, new service to build resilience against growing cyber risks, within and outside the company. CyberWISER Light significantly lowers the entry barrier to effective risk management especially for the many small firms that don't have time, money or IT savvy staff.

CyberWISER Light enables firms to put into practice top advice from small business associations and information security experts: from carrying out regular security risk assessments to conducting regular penetration testing to understand the implications of not protecting PII (Personally Identifiable Information), other sensitive data and intellectual property.

With CyberWISER Light, cyber risk management becomes a central part of the business process. "For companies like WinMedical this is an important opportunity to assess our cyber risks and take adequate steps to minimise the potential impact on our company", says Emanuele Angione, WinMedical s.r.l., an SME and one of the organisations selected for an early trial of CyberWISER Light.

The advanced features of CyberWISER Light are designed to be easy to use. While developed with SMEs in mind, the service gives organisations of any size a first, high-level view of their cyber risk exposure with minimum investments in time and human resources.

Users of the service can also opt to take a vulnerability test to understand what, if any, real vulnerabilities are on your web server or infrastructure. Companies conducting the vulnerability test will get an estimate of the risk impact on their business – a crucial step towards getting smart about cyber security.

Worldwide distributor of electrical supplies firm, REXEL, is another early adopter of CyberWISER Light. "The cyber risk management functionality that WISER delivers provides an additional layer of security management and decision making capabilities currently not available, which will provide value to our business in the evolving energy products and services sector", says Roberto Mannella, Chief Information Security Officer at REXEL. This Paris-headquartered company will also be at the forefront of trialing the full suite of WISER services, which will be rolled out before spring 2017.

How to get started: <https://www.cyberwiser.eu/how-get-started-using-cyberwiser-light>

#### About WISER

WISER is a European H2020 innovation action that puts cyber-risk management at the very heart of good business practice, benefitting multiple industries.

By 2017 WISER will provide a cyber-risk management framework to assess, monitor and mitigate the risks in real time: an online risk management solution for SMEs, and a Risk Management Platform as a Service (RMPaaS) mode of operation for critical infrastructures or highly complex cyber systems requiring the implementation of special controls within the ICT system.

### **CYBER WISER LIGHT SERVICE : UNE APPROCHE INTELLIGENTE DE LA CYBER SÉCURITÉ**

WISER l'initiative européenne de gestion de cyber-risques met à disposition Cyber Wiser Light, un nouvel outil gratuit disponible en ligne pour les petites ou grandes entreprises de e-commerce. Cyber Wiser Light Service les aide à avoir une approche de gestion du cyber risque et à mieux évaluer et traiter les risques pour protéger leurs actifs numériques.

Cyber Wiser Light met la gestion du cyber risque au cœur du process de l'entreprise. C'est un outil simple d'utilisation avec des fonctionnalités avancées qui améliore leur résistance aux menaces. Les PME comme les grandes entreprises peuvent avoir une vue générale de haut niveau de leur exposition aux cyber-risques avec un investissement à minima en temps et en ressources. Une attention particulière est portée sur les petites et moyennes entreprises qui sont vitales à l'économie européenne, mais qui par manque de temps, de ressources et d'argent sont vulnérables aux attaques. Ces arguments ne seront plus des barrières à la gestion du cyber risque avec Cyber Wiser Light qui donne aux entreprises la capacité de valider leur stratégie de cyber sécurité d'où ils veulent quand ils le souhaitent.

**Cyber Wiser Light Service: A smart approach to Cyber Security for EU Businesses everywhere**

May 2016 by Marc Jacob

**Introducing Cyber Wiser Light, a new free-of-charge, online tool available to e-commerce businesses of all sizes that will aide in adopting a risk management approach to assessing and remediating cyber risks and protecting digital assets.**

Cyber Wiser Light makes cyber risk management a central part of the business process. It is an easy-to-use tool with advanced features to help businesses to improve their resilience to cyber threats. SMEs and organisations of all sizes can get an initial, high-level view of their cyber risk exposure with minimal investment in time and human resources to make their lives easier.

With an emphasis on Small and Medium Enterprises crucial to the European economy, but which typically lack the time, money and resources to protect their businesses from cyber threats. Those constraints are no longer a barrier to cyber risk management with the Cyber Wiser Light service which allows enterprises' the ability to validate their cyber security posture anytime, anywhere.

The consequences of a cyber breach can be massive and long lasting. SMEs typically trail behind on information security and surveys show that many fail to consider the impact a cyber-attack would have on their business. Organizations that have already experienced a breach said the attack led to brand damage, loss of customers, and a diminished ability to win new business. Building the resilience of small businesses to cyber crime is important and should be high on all business owners' list of priorities. This is exactly where Cyber Wiser Light comes into play.

**Cyber Wiser Light Service : Une approche intelligente de la Cyber Sécurité**  
mai 2016 par Marc Jacob

WISER l'initiative européenne de gestion de cyber-risques met à disposition Cyber Wiser Light, un nouvel outil gratuit disponible en ligne pour les petites ou grandes entreprises de e-commerce. Cyber Wiser Light Service les aide à avoir une approche de gestion du cyber risque et à mieux évaluer et traiter les risques pour protéger leurs actifs numériques.

Cyber Wiser Light met la gestion du cyber risque au cœur du process de l'entreprise. C'est un outil simple d'utilisation avec des fonctionnalités avancées qui améliore leur résistance aux menaces. Les PME comme les grandes entreprises peuvent avoir une vue générale de haut niveau de leur exposition aux cyber-risques avec un investissement à minima en temps et en ressources. Une attention particulière est portée sur les petites et moyennes entreprises qui sont vitales à l'économie européenne, mais qui par manque de temps, de ressources et d'argent sont vulnérables aux attaques. Ces arguments ne seront plus des barrières à la gestion du cyber risque avec Cyber Wiser Light qui donne aux entreprises la capacité de valider leur stratégie de cyber sécurité d'où ils veulent quand ils le souhaitent.

Les conséquences de cyber violation peuvent être importantes et de longue durée. Les TPE sont à la traîne sur la sécurité de leurs informations. Les études montrent que beaucoup mésestiment l'impact d'une cyber attaque sur leur entreprise. Les entreprises qui ont déjà vécu des cyber violations en connaissent les conséquences et les dommages qu'elles entraînent sur leur marque, leur clientèle et parfois, remet en cause leur capacité de gagner de nouveaux marchés. Pourtant, organiser la résistance des petites entreprises face au cyber crime est primordial et devrait être la priorité de leur direction.

### CyberWISER Light: poskrbite za varnost vaših računalniških sistemov

CyberWISER Light je nova brezplačna storitev za učinkovito upravljanje s tveganji v kibernetnem prostoru, ki znižuje vstopne ovire za prevzemanje uspešnih praks, zlasti za mala in srednje velika podjetja, ki ne razpolagajo s sredstvi ali strokovnjaki s področja varnosti v IKT. XLAB sodeluje pri razvoju storitve CyberWISER Light z integracijo varnostnih mehanizmov za analizo ranljivosti in omejevanja tveganj.

**Tweet:** @cyberwiser Light: za varnost vaših računalniških sistemov in podporo odločanju #riskmanagement @XLAB\_Research <http://goo.gl/r0glnl>

V dobi digitalnega poslovanja je zavedanje o posledicah kibernetnih napadov za poslovanje malih in srednje velikih podjetij ključnega pomena za vzpostavljanje ustreznih varnostnih strategij.

Resnost posledic kibernetnih vdorov in njihov dolgotrajni vpliv, o katerem poročajo podjetja, ki so jim bila izpostavljena, vključuje izgubo zaupanja, ugleda blagovne znamke in zmanjšano sposobnost pridobivanja novih poslov. Glede na raziskave, izvedene v Veliki Britaniji, izgube za majhno podjetje na letni ravni segajo tudi do 6000 eur.

## Launch of CyberWISER Light: Helping European Firms get smart about Cyber Security

ΣΥΓΓΡΑΦΕΑΣ: VGIURKA  
ΗΜΕΡΟΜΗΝΙΑ: ΜΑΙΟΣ 27, 2016 00:30

CyberWISER Light is a free, new service to build resilience against growing cyber risks, within and outside the company. CyberWISER Light significantly lowers the entry barrier to effective risk management especially for the many small firms that don't have time, money or IT savvy staff.

Digital business is fast becoming the only way to do business. Yet evidence shows that too many small- and medium-sized businesses are not considering the impact that a successful cyber attack could have on their business. And many SMEs fail to take adequate steps towards achieving a strong security posture.

The impact of a cyber breach can be huge and long lasting. Business that have already have experienced a breach have said the attack led to brand damage, loss of customers, and a reduced ability to win new business. Studies in the UK, for example, estimate that the annual cost to a small company could be as high as €6000.

A screenshot of a CORDIS news article page. The page header includes the European Union flag and the text "CORDIS Servizio Comunitario di Informazione in materia di Ricerca e Sviluppo". The article title is "Launch of CyberWISER Light: Helping European Firms get smart about Cyber Security". The article text discusses the launch of CyberWISER Light, a free service for small and medium-sized businesses to assess their cyber risks. It mentions that digital business is becoming the only way to do business, but many firms are not taking adequate steps towards achieving a strong security posture. The article also notes that the impact of a cyber breach can be huge and long-lasting, and that CyberWISER Light enables firms to put into practice top advice from small business associations and information security experts. The article concludes with a link to the full article and a link to the CyberWISER website.

SERVICE CYBERWISER LIGHT

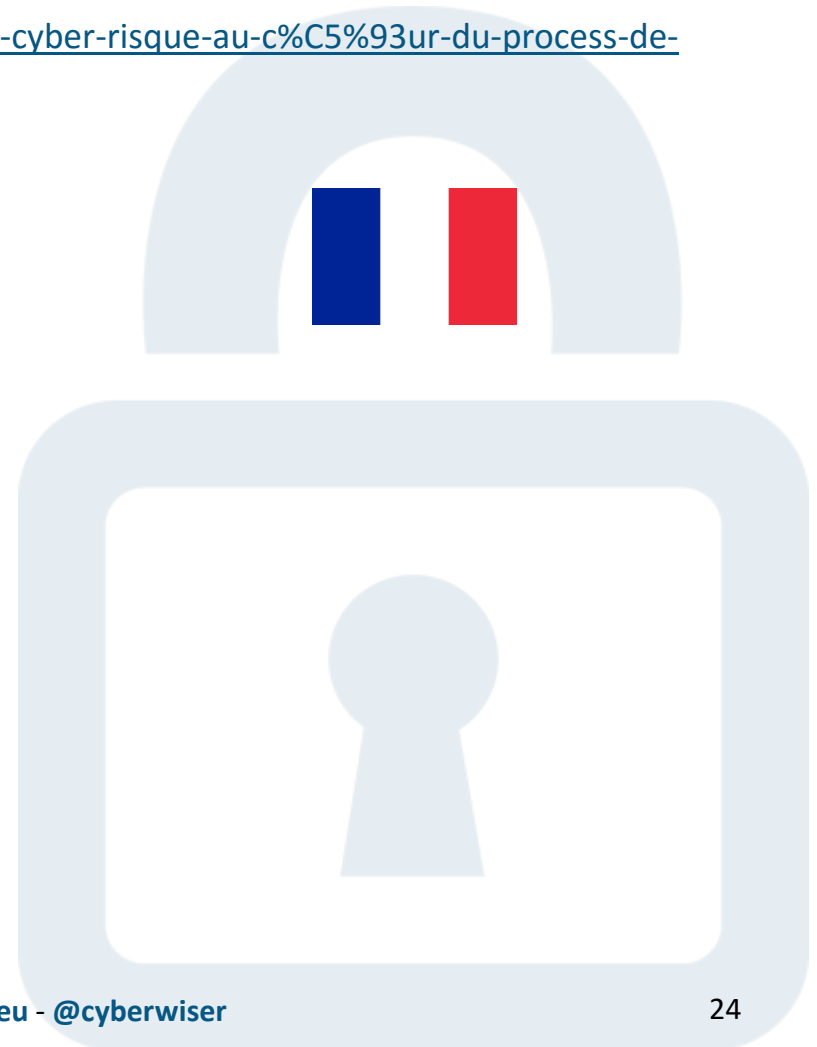

03 Jun 2016

Paris, le 31 mai 2016.

WISER l'initiative européenne de gestion de cyber-risques met à disposition CyberWISER Light, un nouvel outil gratuit disponible en ligne pour les petites ou grandes entreprises de e-commerce. CyberWISER Light Service les aide à avoir une approche de gestion du cyber risque et à mieux évaluer et traiter les risques pour protéger leurs actifs numériques.

CyberWISER Light met la gestion du cyber risque au cœur du process de l'entreprise. C'est un outil simple d'utilisation avec des fonctionnalités avancées qui améliore leur résistance aux menaces. Les PME comme les grandes entreprises peuvent avoir une vue générale de haut niveau de leur exposition aux cyber-risques avec un investissement à minima en temps et en ressources.

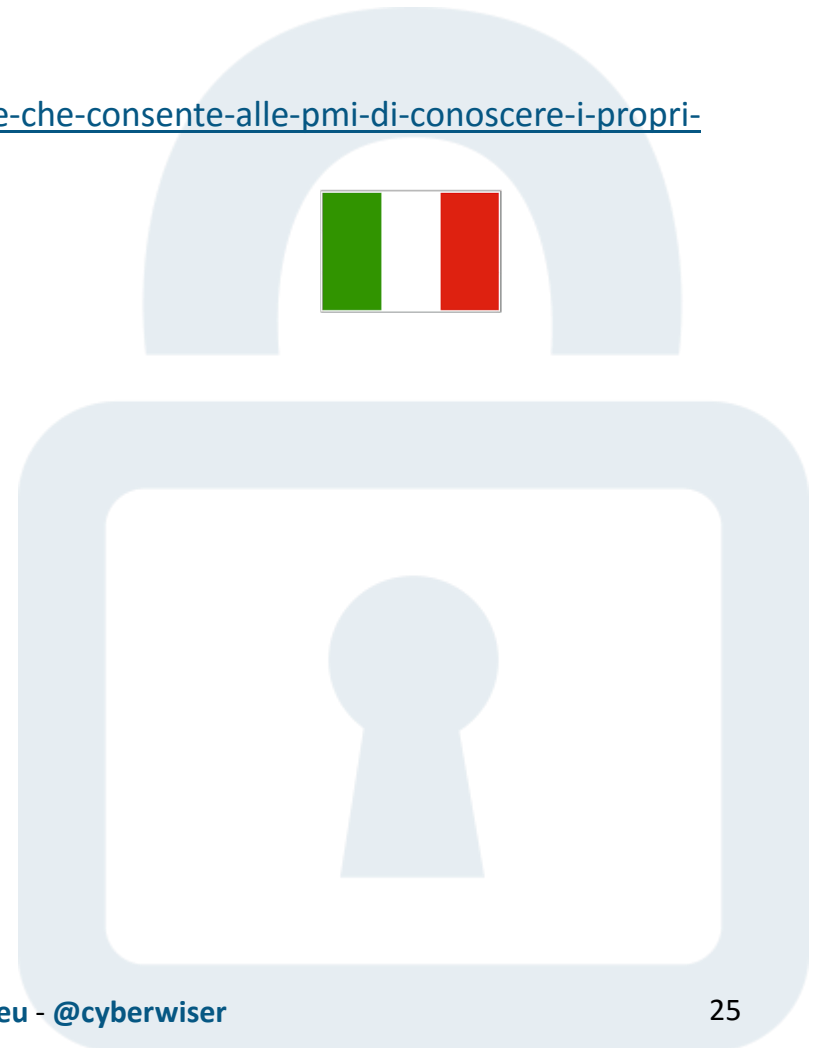

Une attention particulière est portée sur les petites et moyennes entreprises qui sont vitales à l'économie européenne, mais qui par manque de temps, de ressources et d'argent sont vulnérables aux attaques. Ces arguments ne seront plus des barrières à la gestion du cyber risque avec CyberWISER Light qui donne aux entreprises la capacité de valider leur stratégie de cyber sécurité d'où ils veulent quand ils le souhaitent.

**SERVICE CYBERWISER LIGHT**

18 May 2016

La era digital ha impactado de lleno el mundo empresarial y laboral, hasta tal punto que ya no se entiende un negocio sin una presencia destacada de las tecnologías de la información en su operativa diaria. Sin embargo, existe evidencia de que una gran parte de las PYMES desconocen el impacto que un ciberataque exitosamente ejecutado puede tener en su negocio. Esto lleva a que muchas no implementen las acciones necesarias para protegerse de manera efectiva en lo que a ciber-seguridad se refiere.

El impacto de una pérdida de datos puede ser muy grande y recuperarse puede llevar largo tiempo. Las PYMES que ya han sufrido este tipo de incidente dan testimonio de sus consecuencias en forma de daño a la marca, pérdida de clientes y pérdida de capacidad para cerrar nuevos contratos. Estudios en el Reino Unido, por ejemplo, estiman que el coste anual para una PYME puede llegar a 40000 €.

CyberWISER Light es un nuevo servicio que se presta de forma gratuita y está pensado para ayudar a las empresas a hacerse fuertes frente a los crecientes ciber-riesgos, dentro y fuera de la compañía. CyberWISER Light facilita el acceso a una gestión del ciber-riesgo efectiva, muy orientada a PYMES que no tienen ni los recursos económicos ni humanos para abordar con garantías el reto de la ciber-seguridad.

## SERVICE CYBERWISER LIGHT

17 May 2016

17 May 2016 - WISER announces the launch of its new, free tool for European SMEs: CyberWISER Light

Digital business is fast becoming the only way to do business. Yet evidence shows that too many small- and medium-sized businesses are not considering the impact that a successful cyber attack could have on their business. And many SMEs fail to take adequate steps towards achieving a strong security posture.

The impact of a cyber breach can be huge and long lasting. Business that have already have experienced a breach have said the attack led to brand damage, loss of customers, and a reduced ability to win new business. Studies in the UK, for example, estimate that the annual cost to a small company could be as high as €6000.

CyberWISER Light is a free, new service to build resilience against growing cyber risks, within and outside the company. CyberWISER Light significantly lowers the entry barrier to effective risk management especially for the many small firms that don't have time, money or IT savvy staff.

CyberWISER Light enables firms to put into practice top advice from small business associations and information security experts: from carrying out regular security risk assessments to conducting regular penetration testing to understand the implications of not protecting PII (Personally Identifiable Information), other sensitive data and intellectual property.

## 🔒 CorriereEconomia: 'Rete Serve un paracadute contro il cyber risk – Interview with Aon, November 2015

del 09/11/2015 **CORRIERE ECONOMIA** Estratto da Pag. 47

Scenari Dal furto d'identità a quello di segreti industriali, ai virus: il 90% delle imprese mondiali si sente poco protetto dagli hacker

### Rete Serve un paracadute contro il cyber risk

Piano Ue per un sistema di gestione in tempo reale dei rischi. E in azienda servono figure specializzate

**DI ROBERTO E. BAGNOLI**

**F**urto di dati sensibili, sottrazione di segreti industriali, veri e propri sabotaggi che provocano il blocco dei sistemi informativi. Il cyber risk, il rischio di attacchi informatici, in tutto il mondo colpisce sempre più spesso enti e aziende di ogni settore e dimensione.

**Il fronte unito**

In Italia sinora non vi sono stati casi gravi come quello che l'anno scorso hanno dovuto fronteggiare Jp Morgan, cui sono stati sottratti i dati relativi a 83 milioni di clienti, o Carlsbank bank, che ha visto cento banche coinvolte e un miliardo di euro di perdite. Fra settembre e ottobre 2014, però, vi sono stati gli attacchi prima al portale dell'ex sindaco di Roma Ignazio Marino, poi ai sistemi informativi di numerosi comuni italiani, che hanno causato il blocco dei servizi anagrafici.

«Nel nostro paese il cyber terrorismo è meno sentito rispetto ad altri rischi, perché in questi anni non si sono verificati grossi casi di pirateria informatica, com'è successo invece in altri paesi — sostiene Giorgio Aprile, responsabile istituzioni finanziarie di

Aon Italia, fra i leader nel brokering assicurativo e riassicurativo nazionale —. Ma il livello di sofisticazione di questa minaccia è in continuo aumento. Le principali tipologie di aggressioni informatiche sono sabotaggio, furto di dati e trasferimento di capitali: quest'ultima, sempre più diffusa, è particolarmente preoccupante per le istituzioni finanziarie. Si tratta comunque di rischi fortemente sottovalutati a livello internazionale: secondo una ricerca, infatti, il 90% delle aziende di tutto il mondo riconosce di non avere i mezzi adatti per affrontare attacchi informatici».

**Programmi**

La gravità di questa minaccia ha spinto la Commissione europea a varare Wiser, un ambizioso programma di lot-

ta al cyber crime che, secondo la Global risk management survey di Aon, è entrato fra i primi dieci pericoli più temuti dai top manager di tutto il mondo. «La Commissione europea riconosce alla sicurezza informatica un ruolo chiave nello sviluppo del business digitale in Europa che attualmente è penalizzato dall'esistenza di singoli mercati a livello nazionale — aggiunge Aprile —. Per questo finanzia la ricerca in tema di sicurezza informatica, privacy digitale e affidabilità dei sistemi It. Wiser è stato inserito in Horizon 2020, il più importante programma di ricerca, innovazione e sviluppo mai lanciato in Europa, con fondi complessivi per ottanta miliardi di euro disponibili sino al 2020».

Aon Italia guidata da Carlo Clavirino è fra i protagonisti di Wiser. «Abbiamo avuto un ruolo chiave nella progettazione e nel conseguimento del fondo — spiega il manager della società —, e nei prossimi due anni guiderò un team che vede sette partner di diversi paesi. Wiser si propone di realizzare una soluzione di gestione del rischio per istituzioni finanziarie e Pmi, e una piattaforma operativa di risk management». Secondo al-

cune stime, del resto, un mercato digitale comune consentirebbe di creare nell'intera Ue ricavi aggiuntivi pari a 415 miliardi di euro e creare centinaia di migliaia di posti di lavoro ad alta qualificazione.

**In campo**

Che ci sia ancora tanta strada da fare per le aziende di minore dimensione, dove la figura del risk manager non esiste lo dimostrano le riflessioni di due professionisti che questo ruolo lo svolgono in grandi gruppi.

«Nel mercato italiano, il rischio cibernetico viene ancora percepito come uno di quelli che non capiteranno mai alla propria azienda — dice Roberto Bosco, corporate risk manager di Mediaset —. A volte è lo stesso risk manager che ritiene di avere una rete inviolabile, ma i recenti episodi di hacking hanno dimostrato che nessun sistema è completamente sicuro». «Rischi di questo tipo possono essere in parte ridotti e in parte trasferiti — aggiunge Paolo Rubini, head of Insurance, Telecom Italia —, il supporto congiunto del risk manager e del mercato assicurativo sono fondamentali per contenere l'impatto di queste minacce».

## Risk assessment firm joins cybersecurity venture

A global provider of risk management has announced it is participating in a Horizon 2020 project.

Aon Risk Solutions, the global risk management business of UK-based Aon plc, said it will take part in the 'Wide-impact cyber security risk framework', or WISER project aimed at tackling risk of cyber-attacks. By 2017, it is intended that WISER will provide a cyber-risk management framework to assess, monitor and mitigate cyber-risks.

### Aon joins EU cyber risk project

23 June 2015

An EU project to tackle cyber risk has selected Aon Risk Solutions as its financial services contributor to join the initiative.

Read more: [cyber](#)

Aon Risk Solutions has joined a new initiative to tackle cyber risk funded under the European Commission's Horizon 2020 programme.

Bill Peck, chief commercial officer at Aon Risk Solutions for Europe, the Middle East and Africa (EMEA), said: "It is a great privilege to be the only financial services organisation selected by the European Commission to partner with them on their Wide Impact Cyber Security Risk Framework (Wiser) cyber resilience project.

"Working with the European Commission will ensure that business, government and legislators' priorities are aligned to commercial needs across the EU, as this..."

<http://www.consultancy.uk/news/2413/aon-joins-eu-horizon-2020-initiative-to-tackle-cyber-risk>

## WISER

Among the initiatives to be funded is finding ways of protecting businesses from cybercrime, by putting cyber-risk management at the core of good business practice. One project with this aim is the WISER (Wide Impact Cyber Security Risk Framework) project, which aims to create a framework in which cyber risks are assessed, monitored and mitigated.

## Launch of WISER

A new Horizon 2020 initiative to help organisations get WISER about cyber security risks

*"The level of sophistication of cyber-attacks is increasing with at least three different ways of using the cyber weapon: Cyber sabotage, cyber data theft, and cyber transfer of funds. The latter is new and particularly worrying for financial institutions as attacks will lead to substantial economic losses and loss of trust in the financial sector. A staggering 90% of companies worldwide recognise they are insufficiently prepared to protect themselves against cyber-attacks", says Giorgio Aprile, Director, Operational Risk and Capital Management, Aon.*

WISER is a new European initiative that puts cyber-risk management at the very heart of good business practice, benefitting multiple industries in particular critical infrastructure and process owners, and ICT-intensive SMEs. Kicking off in June 2015, by 2017 WISER will provide a cyber-risk management framework able to assess, monitor and mitigate the risks in real time.

#### Aon in new European Commission Horizon 2020 initiative to tackle cyber risk

London  
AON

London, 23 June 2015. Aon Risk Solutions, the global risk management business of Aon plc (NYSE: AON), today announced it is now part of a new initiative to tackle cyber risk funded under the European Commission's Horizon 2020 programme.
