PRIMER

**CYBERWISER.eu PRIMER:
Start your Cybersecurity
and Risk Awareness
Training Course!**

What is at stake?

With the increase in online traffic, Cybersecurity attacks are becoming more common and every organisation is at risk.

Now more than ever, it is crucial to make sure that employees are able to recognise a security threat, otherwise how are they expected to avoid it, report it, or remove it?

According to a Willis Towers Watson report, approximately 90% of all cyber claims are the result of some type of human error or behaviour.

Many organizations continue to focus on the technology aspect of cyber defense, which is crucial, but often at the expense of people risks, which represent the largest source of data breach claims.

- ● **CYBERWISER.eu PRIMER is specifically designed for Students or Early Career Professionals that do not have any knowledge of Cybersecurity best practices.**

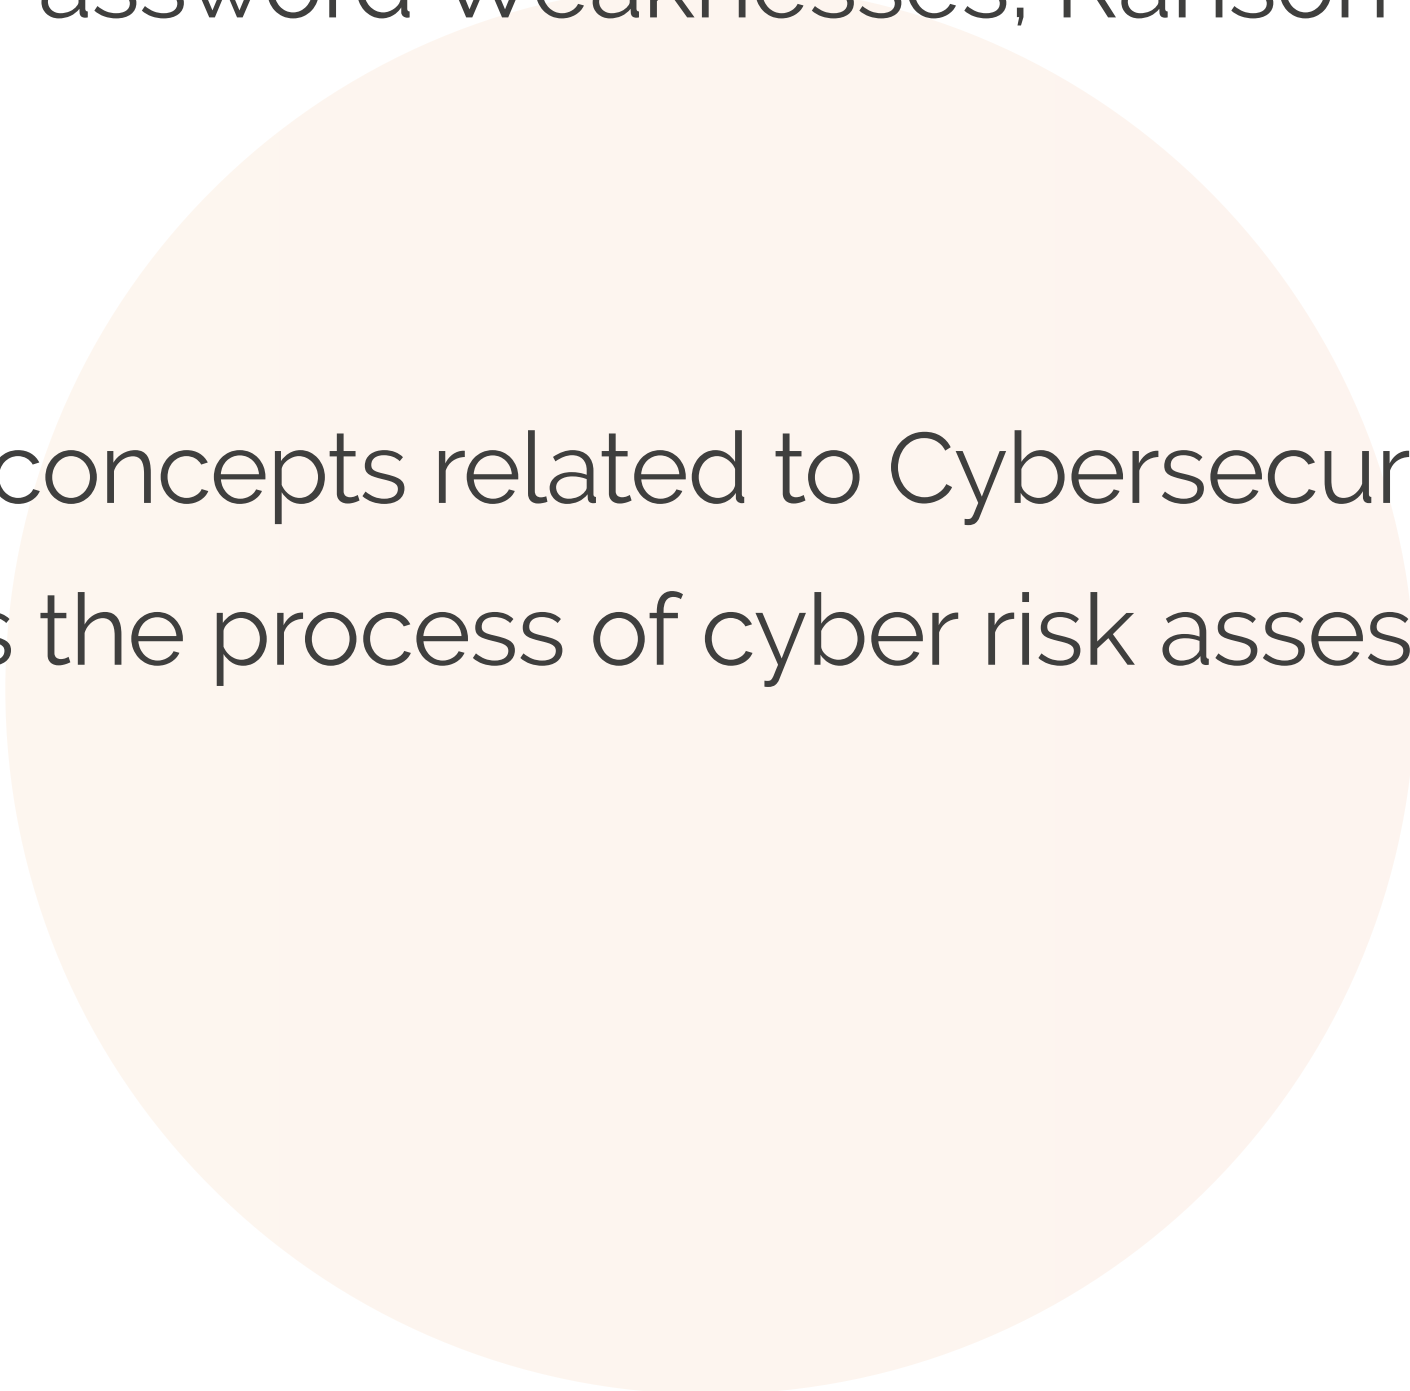

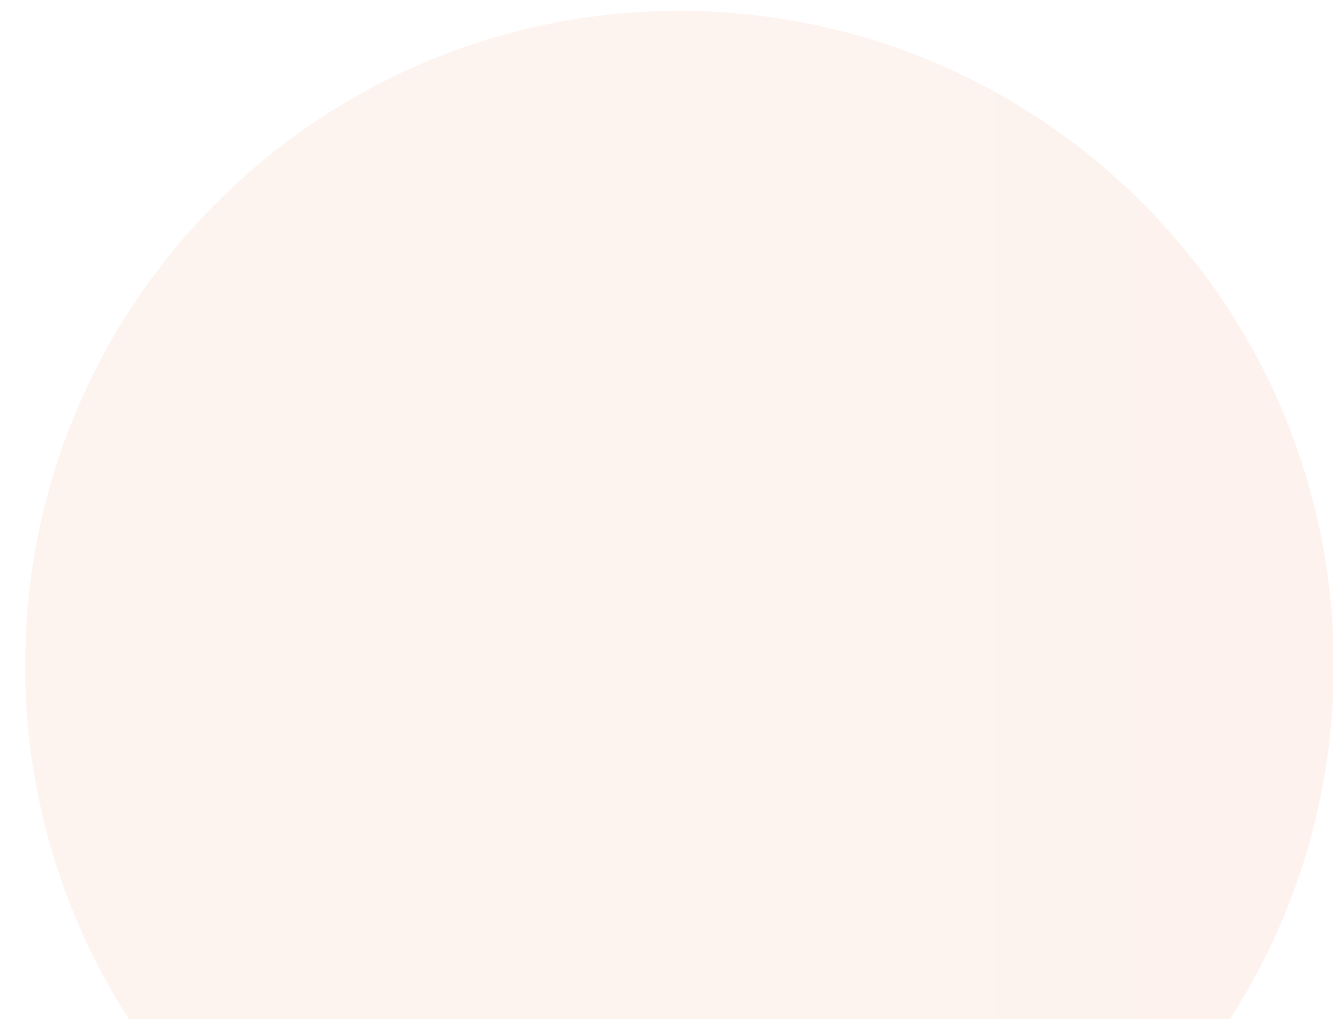

CYBERWISER.eu PRIMER gives a complete understanding of the basic concepts related to Cyber-risk Analysis and Cybersecurity.

Specifically, the PRIMER level targets the following roles:

- System & Software Engineer
- Software Developer
- Junior System Engineers
- Administrative Staff
- Operational Staff

● **What are you going to learn?**

- Understand, describe, and learn how to protect against five common Cyber-risks: Phishing, Password Weaknesses, Ransomware, Data Leakage, and Insider Threat
 - Understand the basic concepts related to Cybersecurity and Cyber-risk assessment, as well as the process of cyber risk assessment
- 
- 
- 

“ Feedback from the users of the CYBEREISER.eu PRIMER platform

“At first I thought it was going to be very easy like a questionnaire on basic topics, but my expectations were exceeded. I was really impressed with the environment and all the things we could do and how easy it is to manage the environment.”

“I thought it would be like things I can already find on the web, but I was surprised by the rich content.”

“Lots of people don't have enough awareness about the technologies they use on a daily basis. Many companies don't realise the impacts of not having proper Cybersecurity solutions against spam emails and phishing. While technical skills are essential for tackling threats, people are often the weakest link in the company and need soft skills.”
